**Press release**

**Alcosystems demonstrating their solution to Riddargatan 1 - the clinic for alcohol and health**

In connection with the inauguration of the new activities at Riddargatan 1 – the clinic for alcohol and health, Alcosystems demonstrates iBAC, a small reliable breathalyzer connected to a mobile application. This solution fits very well into the activities at Riddargatan 1, with a solution that is user friendly and uses modern technology.

The visitors will be able to test a solution that includes a small and very reliable breathalyzer with built-in Bluetooth, which allows it to transmit the result to a mobile phone application. The application shows the value and sends it to a website where users can log in view to their values. The breathalyzer, iBAC, is tested and verified by MHF (Swedish Abstaining Motorists' Association).

Earlier this year Alcosystems signed an agreement with Stockholm Center for Dependency Disorders to evaluate Alcosystems' solution iBAC.
