Press release

PocketMobile and Alcosystems cooperate to offer a mobile solution with a high quality breathalyzer

PocketMobile and Alcosystems have identified a possible cooperation where PocketMobile can offer their customers an end-to-end solution with a breathalyzer connected with a mobile application. Alcosystems has developed an offering that includes a very small breathalyzer - iBAC, with the same reliability that the police are using, connected to a mobile solution. When a user is blowing into the breathalyzer, the result is transferred to a mobile application using Bluetooth, and will be visible in the phone's display. The measured value is simultaneously sent over the mobile network to a central server, at for instance a transportation company, which can then ensure that all drivers are sober. This solution is of interest for many industries where control of alcohol use is essential for safety.

Thanks to the new fuel cell technology Alcosystems' iBAC is accurate and also very small and discreet. Today, alcohol creates major problems and costs to society and business. The European Commission published its report on implementation of the EU alcohol strategy in September 2009. It states that alcohol is the third largest risk factor for ill-health in Europe and causes 195,000 deaths each year. Companies within transportation and hazardous environments are forced to take responsibility to control drinking among their employees. Examples are taxi companies which drives schoolchildren, pilots of airlines, boat transportation, nuclear power plants just to name a few. iBAC from Alcosystems allows solutions to easily gain control over alcohol consumption. iBAC offers an effective and unique method for monitoring alcohol at a distance that radically improves quality and reduces costs.

About Alcosystems

Alcosystems offers a mobile solution that allows to keep control over individuals' alcohol consumption. This is made possible with the help of iBAC, a unique solution of high quality measuring a person's alcohol level. iBAC consists of three main components: a small high quality breathalyzer that measures a person's concentration of alcohol in the blood through exhalation, an application running in a mobile device, for analysis, computation and visualization of the measured value, and a web-portal receiving the measured value.

Alcosystems was founded in 2006 and has its office in Stockholm. The company is owned by the founder as well as private investors.

About Pocket Mobile

PocketMobile is a software company developing and offering the PreCom Platform to the market. PreCom is a modular software platform that streamlines the development, rollout and maintenance of mobile enterprise solutions. PreCom is included in the category MEAP (Mobile Enterprise Application Platform) and is targeted to companies and organizations that are using mobile solutions and applications to streamline their operations and to offer new services to its customers.

Among reference customers are well-known companies such as DHL, DSB, DSV, Fortum, G4S, Ragn-Sells, Schenker, several of which have PreCom implemented on a global basis. PocketMobile delivers PreCom through and with partner companies. Examples of partners are; Creuna, EDB/ErgoGroup, Logica, Softronic, SYSteam, Tieto and other leading systems integrators and enterprise software vendors.

PocketMobile was founded in 2000 and has offices in Stockholm, Gothenburg, Oslo and Copenhagen, and a R&D office in Colombo, Sri Lanka. The company is owned by Investor and the founders.
